Accident Free Environments

The PUWER 98 Regulations recommend that your workshop machinery is serviced annually and that the information is recorded, and the machines certificated for insurance purposes.

Most County Councils require that their schools follow these recommendations.

Servicing is the most cost-effective way of ensuring the longevity of your equipment and can be carried out with almost no disruption to classes, by our qualified engineers.

Our servicing is thorough, exact and documented for your peace of mind, and our knowledge of current legislation is second to none.
